ILLUSTRATIONS APPEARING ON THE COVERS OF  
VOLUME XXIX.

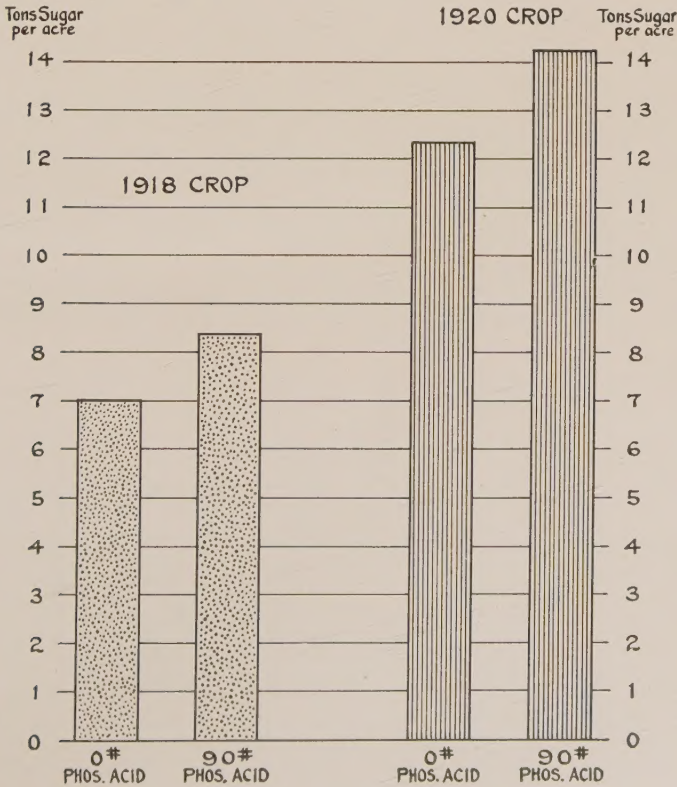

ix

No. 1.

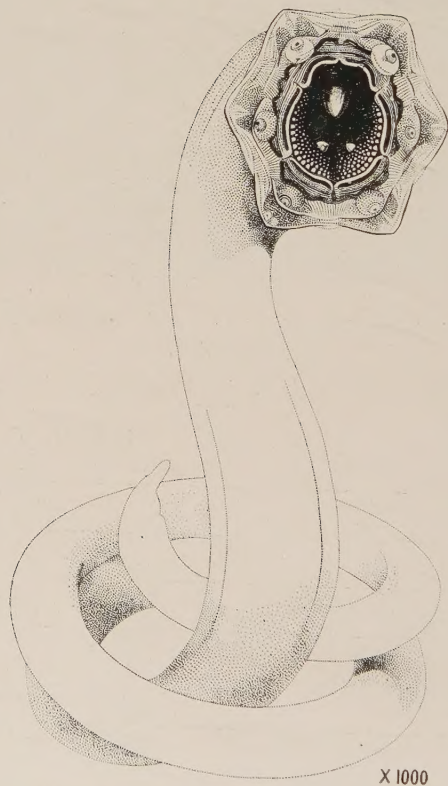

The Meinecke cane chute is shown here above the conveyor formerly used in this installation.

No. 2.

Some of our soils give definite response to phosphoric acid applications. These results are from an experiment on upper Oahu lands.

No. 3.

A beneficial nematode that preys upon injurious species.

No. 4.

View in a Washington Navel orchard showing the method of securing commercial individual tree performance records. This work is closely related to that which is now being carried on by the Experiment Station as a basis for the selection and propagation of superior stools of the important commercial varieties of sugar cane in the Hawaiian Islands.

No. 5.

*Fiji Disease.* Sound and diseased stools of same variety, eleven months old plant cane.

No. 6.

Avenue of Moreton Bay fig trees in the Botanic Garden, Sydney.
